TITLE : HEAT-SHRINKABLE LAMINATED FILM

ABSTRACT : PROBLEM TO BE SOLVED: To provide a heat-shrinkable laminated film with a specific gravity less than 0.960 enhanced in printability and dimensional stability, using an olefinic resin.

SOLUTION: The heat-shrinkable laminated film is obtained by providing an intermediate layer comprising a propylene resin, a petroleum resin and an adhesive resin between a surface layer and a back layer both of which comprises a styrenic resin to form a laminate. The thicknesses of the respective layers satisfy (surface layer + back layer)/intermediate layer = 1/1.5-1/6 and stretching the laminate at least unidirectionally by 2-8 times.
